a description of the problem at hand, why this project is
necessary, what people need to know to assess this project,
and how it fits into the technical strategy or product strategy
or user's goals

This is an application to help me practice learning how to
used Python in a full-stack application. To expedite the completion
of the first iteration of the application I will find help in points
where the time for me to complete would bottleneck the desire
outcome of the entire timeline. I would like to have a prototype
in about 12 - 14 days (~ 2 weeks)

The project can also get me started with understanding Stock Market
Investing. There are various reason why this application is
necessary:

- [x] To bring all the information needed for me to make
  more informed decisions on managing my finances.

- [x] To show off my software developer expertise

- [x] To learn more about Python Programming

- [x] To build a full-stack application in a different wa

- [x] To find patterns in the stock market that can be
  used to evangelize Programming / Learning / Investing.
